Perfect.

My EZ Tech computer is rebooting. Again.

How's this sound?

The map below provides links to Gold King Mine Response sample data, these data are pulled from the sets uploaded on an ongoing basis. You may also view [Individual data sets by date posted](#) in spreadsheet form

Hi all - please take a look, then lets call.

I can see the map, by posting your code as-is into an otherwise empty .HTML file and opening it locally. It's 100% of the page width, but that's fine.

ATTACHED is my HTML file so you can try it.

I don't see the map in my Web CMS test page. It could be because of various reasons. Web CMS is rejecting the external connection to your http. Web CMS is stripping out the class attributes of the div or iframe. I haven't explored enough.

here's the log-in URL to the page (Josh, you'll need to be or get inside the EPA firewall)

CBI/Ex. 4

I did also test post JUST the iframe tagset with equally no results.

*I know a couple of tricks for dodging the Web CMS limits on style, but I can't get around the external connection to another domain. Web CMS doesn't usually cross domains (JSON is one exception).

Do you guys want to have a quick call to discuss? There are a couple different ways of doing it, but in order to make the data public through the GeoPlatform in any way requires an administrator account for GeoPlatform.

Best,

Thanks! We'll get it in the page and test it.

How shall we proceed with added data? For example, there will most likely be data added over the weekend.

Sorry, accidentally sent without finishing. Obviously, feel free to re-size as necessary.

If there are any changes needed to the map or map elements, please let me know and I can change them on my end.

I don't have an iframe tester to check it out first, but below is the code.

I checked with the pio and they want to move forward with removing those 4 data elements from the mapping. Possible?

Forgot to mention...I did pull that data directly from the epa.gov/goldkingmine site, so those data fields do appear in files that the general public is pulling.

Hi Josh, see Jennifer's comments. Is this something doable on the map? Or is this something we'd need to do on the spreadsheet side?

"Please remove MDL, MDL_units, reporting limit, and reporting limit units from fields. "

Danny:

Please remove MDL, MDL_units, reporting limit, and reporting limit units from fields.
Reason for removal of these fields: result numbers may be lower than reporting method lowest detection limit and confuse public. Otherwise interactive map approved for posting.

Hi Danny,

Harvey has the NCC GIS support folks teed up to help expedite the process of getting the map ready for the web. Once you have it approved I'll work with through the process with them and send you the iframe html.

I added the data from New Mexico to the map this AM. I have the datasets broken out into CO and NM layers since those datasets did not have identical fields. When do you anticipate new data?

We've got more data coming in and folks asking about it.

Ideally, I'd like to get it approved and live today
